## Problem Set 8 (PS 8) Due Tuesday March 21

8.1 An air flow is deflected 25 degrees in passing over an expansion corner as sketched in Figure 4.32 in the text. Upstream conditions are $\mathrm{M}=2,3 \mathrm{~atm}$ and 400 K . Calculate the Mach Number, temperature, pressure, stagnation pressure and stagnation temperature after the expansion.
8.2 Make a plot of the Mach Number after an expansion corner vs the deflection of the flow for deflections from 0 degrees to the maximum deflection for an approaching Mach number of 2 . What does this curve represent?
8.3 The upper surface of a 2 D wedge is a concave curve with a radius of 3.236 L centered on the leading edge of the wedge. The surface abruptly becomes horizontal, the orientation of the inlet flow, at a length of L. The Mach Number of the approaching flow is 2 . For 4 points on the concave surface and one point to the horizontal surface calculate the Mach number and orientation of the wave ( oblique shock wave on the concave surface and Mach wave on the horizontal surface) at each location. Sketch the streamline.

$\mathrm{T}_{\mathrm{O} 1}=400 \times 1.8=720 \mathrm{~K}$
$\mathrm{p}_{\mathrm{ol}}=7.8204 \times 3=23.47 \mathrm{~atm}$
P - TableA. $5 @ \mathrm{M}_{1}=2 . ; \mathrm{v}_{1}=26.38$
$v_{2}=v_{1}+\theta_{2}=26.38+25 .=51.38$
P-TableA.5 @ $v_{2}=51.38 ; \mathrm{M}_{2}=3.085$
isentropicTableA.1 $@ \mathrm{M}_{2}=3.0 ; \frac{\mathrm{T}_{\mathrm{O} 2}}{\mathrm{~T}_{2}}=2.904$,
$\mathrm{T}_{\mathrm{O} 2}=\mathrm{T}_{\mathrm{O} 1}=720 \mathrm{~K}, \mathrm{~T}_{2}=\frac{\mathrm{T}_{\mathrm{O} 1}}{2.904}=247.9 \mathrm{~K}$
$\mathrm{P}_{\mathrm{O} 2}=\mathrm{p}_{\mathrm{O} 1}=23.47 \mathrm{~atm}, \mathrm{p}_{2}=\frac{\mathrm{P}_{\mathrm{O} 2}}{\mathrm{p}_{2}}=\frac{23.47}{41.70}=.563 \mathrm{~atm}$

P-M Table A.5@ $\mathrm{M}_{1}=2 ; v_{1}=26.38$
$v_{2} \quad \mathrm{M}_{2} \quad \theta_{2}=v_{2}-v_{1} \quad \mathrm{M}^{*}=\frac{1.2 \mathrm{M}^{2}}{1+.2 \mathrm{M}^{2}}$ $\begin{array}{llll}46.78 & 2.85 & 20.4 & 1.927\end{array}$
