

The Gifted Math Program of the University at Buffalo, now in its 25th year, is a special six-year program for truly exceptional (top 1/2 %) mathematics students from throughout Western New York. The program entirely replaces the student's regular mathematics coursework in their home school. Classes are held twice weekly throughout the academic year and students not only study an enriched curriculum of secondary school mathematics but can earn university credits as well. Our graduates have distinguished themselves in our nation's finest institutions in a wide variety of programs. Visit our website
